Seating Charts & Groups

QUICK START GUIDE

Set things up once, then reuse them all year. Five steps take you from an empty screen to a balanced seating chart on the projector.

YOUR WORKFLOW

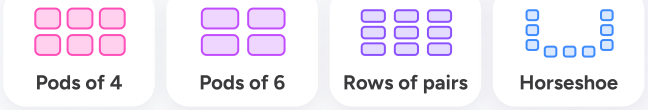

1 Room → 2 Roster → 3 Groups → 4 Seating Chart → 5 Present

1 Build your room

Sidebar → Room

1. In **Start from a layout**, click a ready-made room, or add pieces from **Add to the room** below the grid.
2. **Drag** to move a piece; drag its **round arrow** to turn.
3. Add the **Board** and **Door** so "near the front" and "near the door" rules work.
4. To seat one group at two tables, select both and click **Link as one table**.

READY-MADE LAYOUTS

TIP Build each room once. Every class that meets there can share it.

2 Add your roster

Sidebar → Roster

1. Click **New class**, type the class name and choose its **Room layout**.
2. Click **Import from Google Sheets**, or paste rows copied **with the header row**.
3. Check the purple preview, then click **Import**.
4. Score and category columns become **criteria**: the data you group by.
5. Add **seating rules** if needed: sit apart, sit with, near the front.

TWO WAYS IN

Import from Google Sheets or paste

Names are written First Last

On charts Jordan D. Ava R. Kai C.

TIP The **first criterion counts most**. Put your key score first, such as a summative score.

Your data stays on this device. It saves automatically in this browser and is never sent to a server. Clearing browsing data or switching computers loses it, so **back up monthly**: Settings → Download backup.

RobsonEDU
GROUPING STUDIO

QUICK START

3 Make groups

Sidebar → Groups

1. Pick a type: **Mixed** (a spread of high to low in every group), **Similar** (like with like) or **Random**.
2. Check **Group by**. Add more criteria with **Then by…**; they are balanced across groups.
3. Set **Group sizes** to **Room layout** so groups match your tables.
4. Leave **Avoid recent partners** on and click **Make groups**.
5. **Swap:** tap a name for the best balanced swap, or tap two names in different groups to trade them.
6. Click **Save group set** (pink button) and name it.
7. Click **Send to Seating Chart** to seat these exact groups. Check cards at the top confirm balance and rules.

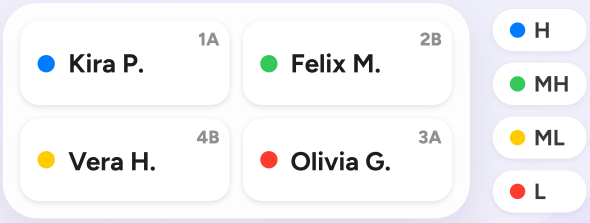

4 Make the seating chart

Opens from Groups

1. **Send to Seating Chart** opens your new chart with each group at a table that fits it, ranked into its seats.
2. Check the chart name and subtitle. Charts save automatically.
3. Next time, make and save new groups, then send them again, or use **Make New Chart** and choose **Saved** to seat any saved group set.

- **Move students:** drag onto another seat to swap, or tap one student, then tap where they go.
- **Bigger names:** use **+** above the room, or click a table's name for a close-up.
- **Not seated tray** (red): drag those students to a seat.

READING A TABLE

Dots show each student's band on your first criterion. The highest (**1A**) and lowest (**3A**) sit diagonally apart.

CHECK FOR PROBLEMS

FIX broken rule
CHECK worth a look
NOTE your reminders
OK all rules met

5 Present or print

Present, top right

1. On your chart, click **Present**. Students see **names only**: no scores, colors, supports or notes.
2. **Separate window** on (Settings)? Drag it to the projector and click **Full screen**.
3. **View: from back** shows the room as students see it. **Reveal** plays the shuffle animation.
4. **Print:** click the printer icon, set Layout to **Landscape**, then Print or Save as PDF.

Undo anything
Undo at the top right, or Ctrl+Z (Cmd+Z on a Mac).

Switch classes
Use the class dropdown in the top bar.

Find old charts
Manage → History, then Open or Duplicate.

Back up monthly
Settings → Download backup. Restore it anywhere.
